

WEEE COMPLIANT ELECTRONIC RECYCLING
Call our team on 01952 580814 for more details...

The Company & Services

Based in Telford, Shropshire, Recycle IT 4U was formed over 5 years ago to help organisations dispose of electronic equipment in an environmentally friendly manner.

“Recycle IT 4U’s primary aim is to try and simplify the IT recycling process for you.”

The senior management at Recycle IT 4U have 26 years combined experience in the IT trade and these managers are able to discern which items can be refurbished. They are also fully aware of the importance of the secure disposal of data stored on hard drives, media tapes etc.

Registered in England. Company No. 5101417
VAT Registration No. 838543794

Services

WEEE Compliant Electronic Recycling

- We will collect your redundant: PC’s, servers, network products, printers, telephones mobile phones, faxes, fluorescent tubes, halogen lamps, projector bulbs.
- We will offer to buy redundant laptops from you.
- We also offer a laptop repair service - please contact us for more details.
- Fast efficient friendly service
- Certificate of disposal issued quoting serial number and description of products collected.

Secure Destruction of Data

- The ultimate secure disposal of hard drives and media via smelting.
- All software removed.
- Certificate of secure data destruction.

Recycling Process

- In accordance with the WEEE EU directive, wherever possible equipment will be refurbished.
- Reclamation of resalable components.
- Reclamation of recyclable materials.

Secure Data Destruction

The security of unwanted data held on file, either in paper form or by way of magnetic media, computer hard drives, backup tapes, CD's or floppy drives is controlled by the Data Protection Act 1998

We employ the ultimate method of destroying data, for highly sensitive information hard drives are "smelted" in a furnace at 900 degrees. A certificate of complete destruction is then issued as proof that the hard drives have been physically destroyed.

This service is used by such organisations as banks, solicitors and ambulance services where confidential information on hard drives demands the highest level of secure destruction.

Customers may escort their unwanted data to the smelting plant to witness the destruction. We are also able to "clean" data from hard drives using specialised software.

We can ensure complete due diligence in computer recycling. Our processes prevent identity theft and thoroughly hinders all known techniques of hard disk forensic analysis.

Fines for loss of data could run into millions

The information commissioner is to be given sweeping new powers to fine those in Whitehall and private companies who deliberately or recklessly lose confidential information, Jack Straw, the justice secretary, disclosed yesterday.

The level of fines, which is still being negotiated, could in the worst cases run to millions of pounds.

The latest figures show that serious breaches and losses of private data happen every working day, with more than 270 reported in the past 12 months.

The Guardian, Tuesday 25th November 2008

Companies are putting their secrets at risk if they fail to completely overwrite hard discs that have reached the end of their useful lives, according to professional computer recyclers.

IT departments may be forced to review how they dispose of unwanted hard drives after a BBC investigation showed that confidential data is being extracted from some UK hard drives that are shipped overseas for recycling and disposal.

In the course of its investigation, the BBC said it found "home addresses, bank account numbers, sort codes, passwords, e-mails that had been sent and highly confidential information relating to people's businesses."
